§ 60.392

- G=volume weighted average mass of VOC per volume of applied solids (kilograms per liter).
- $L_{\rm ci} = volume$ of each coating (i) consumed, as received (liters),
- $L_{\rm cil} = \mbox{Volume of each coating (i) consumed by each application method (l), as received (liters).}$
- L_{dj} =volume of each type VOC dilution solvent (j) added to the coatings, as received (liters),
- $\label{eq:Lrevolume} L_r \!\!=\!\! volume \mbox{ of VOC recovered from an affected} \\ \mbox{ facility (liters),}$
- L_s =volume of solids in coatings consumed (liters),
- M_d =total mass of VOC in dilution solvent (kilograms),
- M_0 =total mass of VOC in coatings as received (kilograms),
- M_r =total mass of VOC recovered from an affected facility (kilograms),
- N=volume weighted average mass of VOC per volume of applied coating solids after the control device

kilograms of VOC

liter of applied solids

- Q_{aj} =volumetric flow rate of the effluent gas flowing through stack (j) leaving the control device (dry standard cubic meters per hour),
- Q_{bi} =volumetric flow rate of the effluent gas flowing through stack (i) entering the control device (dry standard cubic meters per hour),
- Q_{ik} =volumetric flow rate of the effluent gas flowing through exhaust stack (k) not entering the control device (dry standard cubic meters per hour),
- T=overall transfer efficiency,
- T_{l} =transfer efficiency for application method (1),
- $V_{si} \!\!=\!\! \text{proportion of solids by volume in each} \\ \text{coating (i) as received}$

liter solids, and

liter coating

 $W_{\rm oi} {=} proportion$ of VOC by weight in each coating (i), as received

kilograms VOC

kilograms coating

[45 FR 85415, Dec. 24, 1980, as amended at 59 FR 51386, Oct. 11, 1994; 65 FR 61760, Oct. 17, 2000]

§60.392 Standards for volatile organic compounds

On and after the date on which the initial performance test required by

- §60.8 is completed, no owner or operator subject to the provisions of this subpart shall discharge or cause the discharge into the atmosphere from any affected facility VOC emissions in excess of:
- (a) Prime Coat Operation. (1) For each EDP prime coat operation:
- (i) 0.17 kilogram of VOC per liter of applied coating solids when $R_{\rm T}$ is 0.16 or greater
- (ii) 0.17×350 ($^{0.160-R}_T$) kg of VOC per liter of applied coating solids when R_T is greater than or equal to 0.040 and less than 0.160.
- (iii) When $R_{\text{\scriptsize T}}$ is less than 0.040, there is no emission limit.
- (2) For each nonelectrodeposition prime coat operation: 0.17 kilogram of VOC per liter of applied coating solids.
- (b) 1.40 kilograms of VOC per liter of applied coating solids from each guide coat operation.
- (c) 1.47 kilograms of VOC per liter of applied coating solids from each top-coat operation.

[45 FR 85415, Dec. 24, 1980, as amended at 59 FR 51386, Oct. 11, 1994]

§ 60.393 Performance test and compliance provisions.

- (a) Section 60.8 (d) and (f) do not apply to the performance test procedures required by this section.
- (b) The owner or operator of an affected facility shall conduct an initial performance test in accordance with \$60.8(a) and thereafter for each calendar month for each affected facility according to the procedures in this section.
- (c) The owner or operator shall use the following procedures for determining the monthly volume weighted average mass of VOC emitted per volume of applied coating solids.
- (1) The owner or operator shall use the following procedures for each affected facility which does not use a capture system and a control device to comply with the applicable emission limit specified under §60.392.
- (i) Calculate the volume weighted average mass of VOC per volume of applied coating solids for each calendar month for each affected facility. The owner or operator shall determine the
